

$H_{10}/STO-3G$ two-orbital mutual information, $I_{ij} = (s_i + s_j - s_{ij})/2$

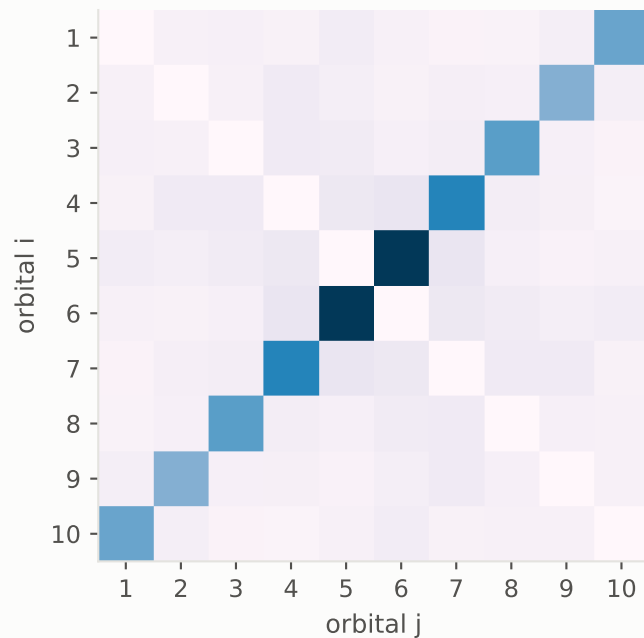

The bright anti-diagonal is the pairing of symmetry-related bonding and antibonding canonical orbitals ($i + j = 11$ here).

Shared colour scale across panels. Diagonal set to zero by definition.

$R = 1 \text{ \AA}$ — weakly correlated

$R = 1.8 \text{ \AA}$ — moderately correlated

$R = 2.6 \text{ \AA}$ — strongly correlated
